Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 edition. Excerpt: .of stationary waves, or interference, or nodes or loops. It was known how to calculate the length of such waves, and even how to produce them of any required or predetermined wave-length, from 1,000 miles to a foot. Other things were known about them which would take too long to enumerate; any homogeneous insulator would transmit them, would repeat or concentrate them if it were of suitable shape, would reflect none of a particular mode of vibration at a certain angle, and so on. All this was known, but Hertz supplied the verification. He inserted suitable conductors in the path of such waves, conductors adapted for the occurrence in them of induced electric oscillations, and to the surprise of every one, himself doubtless included, he found that the secondary electric surgings thus excited were strong enough to display themselves by minute electric sparks. Such was Hertz s contribution to exact science, and it would be extremely difficult to overestimate its importance. Sir Oliver Lodge, one of the brightest lights of contemporary science, whom we have just quoted, and who has done more, than any one else in England to make Hertz and his work known, has said, speaking of the death of that investigator (which occurred in 1894), that he did not go until he had effected an achievement which will hand his name down to posterity as the founder of an epoch in experimental physics ; and in that Signaling through Space withoi Wires,...
